

4.6 #1, 2, 5, 7, 10, 13, 19, 24, 27, 28

1.) Without Calculations, list rank A and dim Nul A. Then find bases for Col A, Row A and Nul A.

$$A = \begin{bmatrix} 1 & -4 & 9 & -7 \\ -1 & 2 & -4 & 1 \\ 5 & -6 & 10 & 7 \end{bmatrix} \sim \begin{bmatrix} 1 & 0 & -1 & 5 \\ 0 & -2 & 5 & -6 \\ 0 & 0 & 0 & 0 \end{bmatrix} = B$$

Two pivot cols $\Rightarrow \dim \text{Col } A = 2$
 $\dim \text{Col } A = \text{rank } A$ So $\text{rank } A = 2$.
 $\text{rank } A + \dim \text{Nul } A = \# \text{ of cols of } A$
 $\dim \text{Nul } A = 4 - 2 = 2$

basis for Col A: $\left\{ \begin{bmatrix} 1 \\ -1 \\ 5 \end{bmatrix}, \begin{bmatrix} -4 \\ 2 \\ -6 \end{bmatrix} \right\}$, basis for Row A: $\left\{ \begin{bmatrix} 1 \\ 0 \\ -1 \\ 5 \end{bmatrix}, \begin{bmatrix} 0 \\ -2 \\ 5 \\ -6 \end{bmatrix} \right\}$

basis for Nul A: we need to reduce to RREF.

$$A \sim \begin{bmatrix} 1 & 0 & -1 & 5 \\ 0 & -2 & 5 & -6 \\ 0 & 0 & 0 & 0 \end{bmatrix} \xrightarrow{R_2/(-2)} \begin{bmatrix} 1 & 0 & -1 & 5 \\ 0 & 1 & -5/2 & 3 \\ 0 & 0 & 0 & 0 \end{bmatrix}$$

So when $A\vec{x} = \vec{0}$

$$x_1 = x_3 - 5x_4$$

$$x_2 = 5/2 x_3 - 3x_4$$

x_3, x_4 free

basis for Nul A:

$$\left\{ \begin{bmatrix} 1 \\ 5/2 \\ 1 \\ 0 \end{bmatrix}, \begin{bmatrix} -5 \\ -3 \\ 0 \\ 1 \end{bmatrix} \right\}$$

2.) $A = \begin{bmatrix} 1 & 3 & 4 & -1 & 2 \\ 2 & 6 & 6 & 0 & -3 \\ 3 & 9 & 3 & 6 & -3 \\ 3 & 9 & 0 & 9 & 0 \end{bmatrix} \sim \begin{bmatrix} 1 & 3 & 4 & -1 & 2 \\ 0 & 0 & 1 & -1 & 1 \\ 0 & 0 & 0 & 0 & -5 \\ 0 & 0 & 0 & 0 & 0 \end{bmatrix}$

$\text{rank } A = 3$

$$\dim \text{Nul } A = 5 - 3 = 2$$

basis for Col A: $\left\{ \begin{bmatrix} 1 \\ 2 \\ 3 \\ 3 \end{bmatrix}, \begin{bmatrix} 4 \\ 6 \\ 3 \\ 0 \end{bmatrix}, \begin{bmatrix} 2 \\ -3 \\ -3 \\ 0 \end{bmatrix} \right\}$

basis for Row A: $\left\{ \begin{bmatrix} 1 \\ 3 \\ 4 \\ -1 \\ 2 \end{bmatrix}, \begin{bmatrix} 0 \\ 0 \\ 1 \\ -1 \\ 1 \end{bmatrix}, \begin{bmatrix} 0 \\ 0 \\ 0 \\ 0 \\ -5 \end{bmatrix} \right\}$

basis for Nul A

$$A \sim \begin{bmatrix} 1 & 3 & 4 & -1 & 2 \\ 0 & 0 & 1 & -1 & 1 \\ 0 & 0 & 0 & 0 & -5 \\ 0 & 0 & 0 & 0 & 0 \end{bmatrix} \xrightarrow{-4R_2+R_1} \begin{bmatrix} 1 & 3 & 0 & 3 & -2 \\ 0 & 0 & 1 & -1 & 1 \\ 0 & 0 & 0 & 0 & 1 \\ 0 & 0 & 0 & 0 & 0 \end{bmatrix} \xrightarrow{\begin{matrix} 2R_3+R_1 \\ -R_3+R_2 \end{matrix}}$$

$$x_1 = -3x_2 - 3x_4$$

$$x_3 = x_4$$

$$x_5 = 0$$

x_2, x_4 free

basis for Nul A: $\left\{ \begin{bmatrix} -3 \\ 1 \\ 0 \\ 0 \\ 0 \end{bmatrix}, \begin{bmatrix} -3 \\ 0 \\ 1 \\ 1 \\ 0 \end{bmatrix} \right\}$

- 5.) If a 4×7 matrix A has rank 3, find $\dim \text{Nul } A$, $\dim \text{Row } A$ and $\text{rank } A^T$.

$$\dim \text{Nul } A = 7 - 3 = 4$$

$$\text{rank } A^T = \dim \text{Col } A^T = \dim \text{Row } A = 3$$

$$\dim \text{Row } A = \text{rank } A = 3$$

- 7.) Suppose a 4×7 matrix A has four pivot columns. Is $\text{Col } A = \mathbb{R}^4$?

Is $\text{Nul } A = \mathbb{R}^3$? Explain.

$\text{Col } A$ is a subspace of \mathbb{R}^4 and since $\dim \text{Col } A = 4$, we must have $\text{Col } A = \mathbb{R}^4$.

$\text{Nul } A$ is a subspace of \mathbb{R}^7 , it has dimension 3, but that doesn't mean $\text{Nul } A = \mathbb{R}^3$.

- 10.) If the null space of an 8×7 matrix A is 5-dimensional, what is the dimension of $\text{Col } A$?

$$\dim \text{Col } A + \dim \text{Nul } A = 7$$

$$\dim \text{Col } A = 7 - 5 = 2$$

- 13.) If A is a 7×5 matrix, what is the largest possible rank of A ?
If A is a 5×7 matrix, what is the largest possible rank of A ?

In both cases the largest number of pivots we can have is 5, so this is the largest possible rank of A .

- 19.) Suppose the solutions of a homogeneous system of five linear equations in six unknowns are all multiples of one nonzero solution. Will the system necessarily have a solution for every possible choice of constants on the right sides of equations?

$A\vec{x} = \vec{0}$ where A is 5×6 has $\text{Nul } A$ with dimension 1 by the first sentence.

Therefore $\text{Col } A = 6 - 1 = 5$. Since $\text{Col } A$ is a subspace of \mathbb{R}^5 with dimension

5, $\text{Col } A = \mathbb{R}^5$. Therefore yes, the system $A\vec{x} = \vec{b}$ will have a solution

for every $\vec{b} \in \mathbb{R}^5$.

4.6 continued

24.) Is it possible for a non homogeneous system of seven equations in six unknowns to have a unique soln for some right hand side of constants? Is it possible for such a system to have a unique soln for every right hand side? Explain.

$A\vec{x} = \vec{b}$ where A is a 7×6 matrix. In order to have a unique solution for some \vec{b} on the right hand side, we must have a pivot in every column. So we must have $\text{rank } A = 6$ for this to be possible. Since A can have at most 6 pivots, $\text{rank } A \leq 6$ and so $\text{rank } A = 6$ when $\text{Nul } A = \{0\}$. So the first statement is possible. Since $\text{Col } A$ is a subspace of \mathbb{R}^7 and $\dim \text{Col } A = \text{rank } A \leq 6$, there exists a $\vec{b} \in \mathbb{R}^7$ such that the system is inconsistent. Therefore the second statement is not possible.

27.) A is $m \times n$. Which of the subspaces $\text{Row } A$, $\text{Col } A$, $\text{Nul } A$, $\text{Row } A^T$, $\text{Col } A^T$, $\text{Nul } A^T$ are in \mathbb{R}^m and which are in \mathbb{R}^n ? How many distinct subspaces are in this list?

$$\mathbb{R}^n : \text{Row } A, \text{Nul } A, \text{Col } A^T$$

$$\mathbb{R}^m : \text{Col } A, \text{Row } A^T, \text{Nul } A^T$$

$$\text{Row } A^T = \text{Col } A \text{ and } \text{Col } A^T = \text{Row } A$$

So there are 4 distinct subspaces in the list $\text{Row } A, \text{Col } A, \text{Nul } A, \text{Nul } A^T$

28.) Justify the equalities: a.) $\dim \text{Row } A + \dim \text{Nul } A = n$
(A is $m \times n$) b.) $\dim \text{Col } A + \dim \text{Nul } A^T = m$

$$\text{a.) } \dim \text{Row } A = \dim \text{Col } A = \text{rank } A$$

Since $\text{rank } A + \dim \text{Nul } A = n$, Substitution gives us $\dim \text{Row } A + \dim \text{Nul } A = n$.

$$\text{b.) } \text{Since } A^T \text{ is } n \times m, \text{rank } A^T + \dim \text{Nul } A^T = m \text{ and } \text{rank } A^T = \dim \text{Col } A^T =$$

$$= \dim \text{Row } A^T = \dim \text{Col } A. \text{ Therefore } \dim \text{Col } A + \dim \text{Nul } A^T = m \text{ by}$$

substitution.
